OBJECTIVE

To work as a Data Engineer, helping teams build and maintain data pipelines that collect, transform and deliver reliable information. Focused on developing hands-on skills in SQL, Python, ETL/ELT and data quality, contributing with responsibility, attention to detail and continuous professional growth.

SKILLS

- **Programming Languages:** Python, SQL
- **Tools:** SQL Server, Postgres, MongoDB, Power BI, Git/GitHub
- **Other Programming Languages:** Java
- **Methodologies:** Scrum, Kanban
- **Languages:** Portuguese (native), English (A2)

EXPERIENCE

2023 – PRESENT | PUBLISOFT | SUPPORT ANALYST

- Provide support for the company's ERP system, documenting modules, processes and business workflows.
- Perform data analysis with SQL Server to extract information, build reports and support the development of dashboards.
- Built an automated pipeline to ingest, validate and analyze backup spreadsheets, replacing a manual process and reducing verification time.

2021 – 2023 | VMH TRANSPORTES | ADMINISTRATIVE APPRENTICE

- Recorded invoices, tracked balance sheets and managed the receipt of parts.
- Supported the creation of operational reports through SQL queries to organize and analyze internal data.

RELEVANT PROJECTS

BPTRACKER – BACKUP VALIDATION PIPELINE (2026)

- ETL pipeline in **Python** to ingest and process backup spreadsheets, detecting inconsistencies and failures per client and consolidating overall metrics.
- Transformation and data quality layer with **Pandas**; exploratory analysis with **ydata-profiling**; interactive interface with **Streamlit**.
- Evolved from a learning project into an internal tool used by the company, eliminating manual checks and improving backup traceability.

EDUCATION

SOFTWARE ENGINEERING | Unicesumar | 2023 – Present

COURSES & CERTIFICATIONS

- SQLite – Origamid
- Python for Data – Teo Me Why
- Power BI – Data Science Academy
